

Dear "Audi Owner",

Find attached pictures of a compatible centre light internal cluster that will accept the Audi Ambient Lighting module.

The following pictures are taken from an Audi A4 2002 (B6 Chassis), but this light unit is used on other models:

The following close-up pictures show the necessary fixings that should be present:

The RED circles shows where it fits in the back assembly and the BLUE circles are the integral clips that should be present to keep the LED light module in place.

Confirmed Compatible for Saloon & Avant Models, (Cabriolet models excluded):

- Audi A3 (2001 > 06/2004) : confirmed by other Audi owners
- Audi A3/S3 (1999/2000 model "8L-chassis")
- Audi A4 (2001 > 06/2004)
- Audi A4 (06/2004 > 2007)
- Audi A4 (2007- model B7 chassis)

Audi A3/S3 (1999/2000 model "8L-chassis"):

We have had success in fitting this modification to an Audi S3 (V-registration = 1999/2000 8L Chassis. The light cluster design is slightly different – see pictures below - but has provision to mount the LED module using the same internal plastic retaining clips as the A4. Wire connection points are in place on this model identical to the A4.

Instructions supplied will be for the A4, but the similarities on the A3/S3 are such that fitting this modification should be very straight forward.

Audi S3 – 1999/2000 8L Chassis
Internal Light Unit Cluster with
Ambient LEDS retrofitted

“with the covers removed”
